

Final Project Proposal

Name of Mobile APP	Startup doctor	Name of Global Team	TyrNav
Names of Korean Students	Chimin Choi Huiyoung Jeong	Names of International Students	Muhtasim Zaman Mahim Nazmus Sakib Mouin
Related SDG	SDG#8	Related School Subject	Social Studies, Economy
Target Education Level	☐ PRIMARY ☒ JUNIOR SECONDARY ☒ SENIOR SECONDARY	Target Country	Emerging countries with entrepreneurial growth potential.
Summary of the App	Startup doctor is a startup resource platform that empowers entrepreneurs with learning modules, community networking, and growth opportunities. It promotes sustainable business practices and funding access, aiming to foster economic development in line with UN SDG #8 (Decent Work and Economic Growth).		

☐ Overview

Please describe your motivation to develop App and define situation or problems related to the theme you have thought with idea or direction to solve them.

Content

Images (if necessary)

Startups are crucial for achieving SDG 8 (Decent Work and Economic Growth) by driving innovation, creating jobs, and fostering economic growth. Solving startup challenges like funding access, visibility, mentoring, and innovation support directly contributes to SDG 8's targets of sustainable economic growth, higher productivity, and increased entrepreneurship, ultimately promoting inclusive development and decent work opportunities. We believe that this fundamental problem stems from the following sources:

1. Limited access to funding opportunities of startups

→ According to the Startup Business Survey (2021), 39% of respondents cited securing funding as the biggest obstacle to starting a business. Many startups fail due to lack of funding, partly because there are fewer investors in some markets and less information available about funding opportunities.

2. Limited visibility and networking opportunities of new business

→ New startups often struggle to gain visibility in crowded markets. According to a report by CB Insights, 14% of startups fail due to poor marketing and lack of visibility. In emerging markets, this problem is even more pronounced. A study by the World Economic Forum found that in developing economies, over 60% of small businesses lack a significant online presence, severely limiting their ability to reach potential customers and investors. This invisibility can lead to missed opportunities for growth, partnerships, and funding, ultimately contributing to higher failure rates among new ventures.

3. Insufficient support and mentoring for SMEs

→ Many aspiring entrepreneurs lack the fundamental knowledge and skills needed to start and run a successful business. According to a survey by the Kauffman Foundation, 82% of new business owners admit to not having all the skills required to grow their company. Furthermore, a Global Entrepreneurship Monitor report found that in many countries, especially developing ones,

entrepreneurship education is severely lacking in both formal and informal educational systems. This knowledge gap leads to poor decision-making, inefficient operations, and ultimately, higher failure rates among new startups. Without proper guidance on essential aspects like business planning, financial management, and market analysis, many potential entrepreneurs either never start their businesses or struggle to keep them afloat.

4. Lack of innovation in existing startups

→ In Korea, out of 40,081 venture companies in 2023, only 19 are unicorns. This suggests a lack of truly innovative startups, possibly due to entrepreneurs choosing popular but saturated business models without proper market understanding. This leads to market homogenization and hinders innovation in the startup ecosystem.

□ Solutions

Please describe what you have found to solve problems defined above or other relevant problems with the originality of your App to be developed through this. Also, describe how you will use the solution factors that you have found to develop your app include purpose that you eager to achieve.

We propose a comprehensive platform to support and promote startup creation and growth. We define the following solutions for each source of the problem:

1. Promotion of Startups: Our solution involves creating a dedicated space within the app where startups can showcase their businesses. This feature allows entrepreneurs to make their ventures visible to a wide audience, including potential customers, partners, and investors. Users can also explore other businesses, gaining market insights and ensuring their ideas are original.

2. Learning Contents for Startups: We address this by providing comprehensive learning modules covering essential aspects of entrepreneurship. These modules offer structured education on business fundamentals, financial management, market analysis, and more. By accessing this knowledge, users can learn efficiently and safely, reducing the risk of failure typically associated with trial-and-error methods.

3. Promoting Funding Opportunities: To tackle one of the biggest hurdles for startups, our app will aggregate and simplify access to information about various funding sources, including government grants, corporate sponsorships, and venture capital. This centralized resource will make it easier for entrepreneurs to identify and pursue appropriate funding options for their innovative businesses.

4. Implementation of innovation in existing startups: By combining the visibility platform, educational resources, and funding information, we aim to foster a more innovative startup ecosystem. Entrepreneurs will be better equipped to identify unique opportunities, develop original business models, and access the resources needed to bring innovative ideas to fruition.

□ Design of App

Please describe your idea of developing App and organize data that you need to develop, why it needs, how to utilize and how to get them. Design algorithm, main functions and UI(Screen of App) of your App. Describe the way of store data in your app and data structure.

Content

The **STARTUP DOCTOR** app is built using React Native with Expo for mobile front-end development, while Appwrite powers the backend, providing reliable data management and user authentication. We focused on Android for its accessibility in developing countries, ensuring the app reaches our target users in a practical, cost-effective way. We chose not to use third-party integrations, keeping the app self-contained and straightforward.

For the design, we used Figma to create a clean, user-centric interface. The design emphasizes simplicity and ease of use, making it accessible for users with varying levels of technical experience.

Our data organization relies on Appwrite's database, which combines relational and non-relational structures. Specific collections and tables handle data for each feature, such as learning modules, the business directory, and user profiles. This structure allows us to manage and retrieve data quickly, creating a smooth user experience.

The app's core functions include a library of learning modules, a business directory, and information on funding opportunities. Users first see a welcome slideshow, then move to an authentication screen to sign in or sign up, and finally arrive at the home screen. JSON stores the learning modules, while relational data structures manage the directory and user data.

□ Visualization of Appx

Please explain UI, main functions, and motion process of your App.

Content with Images (prototype of UI)

Splash Screen, Onboarding Screen & Sign In / Sign Up Page

- Prominently Displays the App Logo: The logo is prominently displayed at the top of the page to reinforce brand identity.
- Login Box for Existing Users: A box where existing users can enter their login credentials (username and password).
- "Sign Up" Button for New Users: A button that redirects new users to the sign-up page.
- Sign Up Page Includes Fields for User Information: The sign-up form includes fields for name, email, password, and other necessary information to create a new account.

Home Page

- **Dashboard Layout with Quick Access to Key Features:** A user-friendly dashboard that provides quick access to the platform's main features.
- **Summary of Recent Funding Opportunities:** A section that gives an overview of the latest funding opportunities.
- **Highlights of Trending Startups in the Directory:** Showcases the most popular startups in the directory.
- **Progress Tracker for Current Learning Module:** Displays the user's progress in their current learning module.
- **Navigation Menu for Easy Access to Other Sections:** A navigation menu that allows users to easily access different parts of the platform.

Startup Directory Page

- Grid or List View of Startup Profiles: Startups are displayed in either a grid or list view for easy browsing.
- Search and Filter Options: Users can search and filter startups by industry, location, funding stage, and other criteria.
- Each Startup Card Shows Logo, Brief Description, and Key Metrics: Startup cards include essential details such as the startup's logo, a brief description, and key performance metrics.
- Clicking a Card Opens a Detailed Profile View: Users can click on a startup card to view more detailed information about the startup.
- Promotion of Startups
- Investors can know about the business from the pitch deck

Learning Modules Page

- **Business Fundamentals:** A learning module focused on the basics of running a business.
- **Financial Management:** A module dedicated to managing finances effectively.
- **Marketing and Growth:** A module that covers strategies for marketing and growing a business.
- **Innovation and Technology:** A module on leveraging technology and fostering innovation in business.

Funding Opportunities Page

- **List of Current Funding Rounds Worldwide:** A comprehensive list of available funding rounds from around the world.
- **Filter Options:** Users can filter funding opportunities by amount, type of funding, industry, and location.
- **Detailed View for Each Opportunity with Application Guidelines:** Each funding opportunity has a detailed view that includes application guidelines and other important information.
- **"Apply Now" Button Linking to Relevant Application Forms:** A button that takes users directly to the application form for each funding opportunity.

Profile Page

- User's Personal and Business Information: Displays the user's personal and business details.
- Option to Edit Profile Details: Allows users to update their profile information.
- Performance Metrics: Shows metrics such as modules completed and network size.
- Settings Section: Includes settings for notifications, privacy controls, and other preferences.
- Logout Button: A button for users to sign out of their account.

The image displays three mobile app screenshots. The first screenshot shows the 'Profile Page' with a user profile for '@mahim' at the 'Maturity Stage' and a section for 'My Business(es)'. The second screenshot shows the 'Add New Business' form with fields for 'Name of the Business', 'Business Description', 'Industry' (set to 'Agriculture and Farming'), 'Year Founded', 'Startup Stage' (set to 'Idea Stage'), and 'Location'. The third screenshot shows the 'Create Business' form with fields for 'Team Size', 'Website', 'Email', 'Key Products/Services', and an 'Upload Pitch Deck (PDF)' button, followed by a 'Create Business' button.

□ Results and Value

Please describe results of sharing App with other friends and its value. If you don't have visualization, describe value of solving problems or App development.

Content	Images (if necessary)
Our app aims to lower barriers to entry for aspiring entrepreneurs and foster a more inclusive, innovative startup ecosystem across diverse markets. By providing comprehensive learning modules, startup visibility, and funding access, we expect to empower a new generation of entrepreneurs, particularly in regions with untapped potential. As our platform gains traction, we anticipate users becoming more knowledgeable about startup fundamentals and more confident in pursuing their entrepreneurial ambitions. Job Creation: As more startups launch and grow, they will create new employment opportunities, contributing to economic development in various regions. Innovation Boost: By exposing users to diverse business models and fostering creativity, we expect to see an increase in innovative solutions across different industries. Economic Diversification: Encouraging entrepreneurship in underserved markets can lead to more diverse economies, reducing dependence on traditional sectors. Funding Efficiency: Improved access to funding information could result in more startups securing necessary capital, leading to faster growth and scalability. Driving innovation: By exposing users to diverse business models and fostering creativity, our solution can catalyze innovation across various industries. This can lead to the development of new products, services, and solutions to pressing societal challenges. Knowledge Sharing: The community aspect of our app will facilitate knowledge transfer between experienced entrepreneurs and newcomers, accelerating learning and reducing costly mistakes. Fostering global connections: Our platform has the potential to create a global community of entrepreneurs, facilitating knowledge sharing and collaboration across borders. This can lead to cross-cultural innovations and partnerships. Reducing startup failure rates: By providing comprehensive learning modules and access to funding information, our solution can help entrepreneurs make more informed decisions, potentially reducing the high failure rates often associated with startups. Creating social impact: Empowering entrepreneurs, especially in underserved markets, can lead to positive social changes such as poverty reduction, improved education, and better healthcare solutions. Personal growth and learning: Working on such an impactful project can provide a team with valuable insights into global entrepreneurship trends and challenges, contributing to their personal and professional development. Overcoming systemic barriers: Our solution aims to address systemic issues like lack of access to capital and knowledge, which can be particularly motivating for team members passionate about social equity. Building a legacy: The potential long-term impact of our platform in shaping the global entrepreneurial landscape can be a strong motivator for the team to create something truly transformative. Technological innovation: Developing a comprehensive platform that integrates learning, networking, and funding access presents exciting technical challenges that can motivate team members interested in cutting-edge technology.	

□ Utilization Plan and Points to be Desired

Please describe what you want the App to be utilized in various sections like society, economy, education with some points to be desired or modified.

Content

Images (if necessary)

Society

Our app aims to reduce unemployment by fostering startup creation and growth, which can lead to several societal benefits:

1. Job Creation: As startups emerge and expand, they will create new employment opportunities across various sectors, potentially improving overall living standards.
2. Social Innovation: By encouraging entrepreneurship, the app could help address various societal challenges through innovative business solutions.
3. Community Development: Successful local startups can reinvest in their communities, leading to improved infrastructure and services.
4. Skill Development: As more people engage with startups, there will be an increase in skill development and knowledge transfer within communities.

Points to be desired:

- Incorporate features that encourage startups to focus on solving local social issues.
- Include metrics to track the social impact of startups using the platform.

Economy

The app is designed to stimulate economic growth by expanding the startup ecosystem:

1. Economic Diversification: By democratizing access to entrepreneurial resources, the app aims to diversify local and national economies, reducing dependence on traditional industries.
2. Attracting Investment: A thriving startup ecosystem can attract more investment capital to the market, both domestic and foreign.
3. Innovation-Driven Growth: By fostering innovative startups, the app can contribute to higher productivity and economic efficiency.
4. Global Competitiveness: As local startups grow and expand internationally, they can enhance the global competitiveness of the national economy.

Points to be desired:

- Implement features to connect startups with potential investors or funding sources.
- Provide tools for economic impact assessment of startups using the platform.

Education and Innovation

The app provides accessible, practical education on entrepreneurship:

1. Practical Skills Development: The learning modules fill gaps in traditional educational systems by offering hands-on, practical knowledge.
2. Continuous Learning: As the startup market evolves, the app can provide up-to-date information and skills, promoting lifelong learning.
3. Innovation Catalyst: By exposing users to diverse business models and encouraging creative problem-solving, the app drives technological advancement and innovation.
4. Knowledge Sharing: The community aspect of the app facilitates peer-to-peer learning and mentorship opportunities.

Points to be desired:

- Implement a system for regular updates to educational content to ensure relevance.
- Consider partnerships with educational institutions to provide accredited courses.
- Incorporate expert mentoring for startups: Integrate a feature that connects startups with experienced entrepreneurs and industry experts for personalized mentoring. This could include:
 - A vetted network of mentors with proven track records in various industries
 - Scheduled one-on-one mentoring sessions
 - Group mentoring sessions or webinars on specific topics
 - A matching system that pairs startups with mentors based on industry, stage of growth, and specific needs
 - Feedback and rating system to ensure high-quality mentoring experiences
 - Option for long-term mentoring relationships to support startups through different growth stages

Technology

1. Digital Transformation: The app can accelerate digital transformation across industries by showcasing tech-enabled startups.
2. Tech Skill Development: As users engage with the platform, they'll develop digital literacy and tech skills.
3. Data-Driven Insights: The app can provide valuable data on startup trends and market needs, informing policy and investment decisions.

Points to be desired:

- Ensure robust data privacy and security measures.
- Consider implementing AI-driven personalized learning paths and startup recommendations.

Governance

1. Policy Insights: Data from the app can inform policymakers about the needs of startups and entrepreneurs.
2. Public-Private Partnerships: The app could facilitate collaborations between startups and government agencies to solve public sector challenges.
3. Regulatory Sandbox: The app could potentially serve as a platform for testing new regulations in a controlled environment.

Points to be desired:

- Develop features to facilitate dialogue between startups and policymakers.
- Implement tools to help startups navigate regulatory requirements.

Environment

1. Green Innovation: The app can encourage and showcase startups focused on environmental solutions.
2. Resource Efficiency: By digitizing many aspects of startup creation and management, the app can contribute to reduced resource consumption.

Points to be desired:

- Include specific modules on sustainable business practices.
- Implement features to track and showcase the environmental impact of startups.
